what is wrong in thsi game code..?

The bug is in how duplicate letters get scored. Take the answer as `crane` (you solved it with that) and look at your guesses:

- `eeeee` shows `yellow yellow yellow yellow green`. There's only one E in `crane`, and the green at position 5 already uses it, so the other four should be **gray**.
- `eerie` shows `yellow yellow yellow gray green`. It should be `gray gray yellow gray green`.
- `eagle` shows `yellow yellow gray gray green`. The first E should be gray.

Your code is probably marking a letter yellow just because it appears anywhere in the answer, without tracking whether that letter has already been "used up" by a green or an earlier yellow.

The fix is a two-pass scoring, probably in `feedback.py`:

python

```
from collections import Counter
```

```
def get_feedback(guess, answer):
    result = ["gray"] * len(answer)
    remaining = Counter()

    # pass 1: greens, and count the answer letters NOT matched green
    for i, (g, a) in enumerate(zip(guess, answer)):
        if g == a:
            result[i] = "green"
        else:
            remaining[a] += 1

    # pass 2: yellows, only if an unmatched copy of that letter is
left
    for i, g in enumerate(guess):
        if result[i] == "gray" and remaining[g] > 0:
            result[i] = "yellow"
            remaining[g] -= 1

    return result
```

With this, `eeeee` gives `gray gray gray gray green` and `eerie` gives `gray gray yellow gray green`, which is what real Wordle does.

I can't see your `feedback.py`, so paste it if you want me to patch your actual function instead of this generic version.

pdf

what are the deliverables

Identifying the project deliverables from the handout.

You need to upload three things to your personal Lab repo, under a **Lab-4** folder:

1. **Videos**: a ~10 second recording before you change anything, and another ~10 seconds after all your changes.
2. **Updated code**: the fixed game plus all the features from the repo's README.
3. **Chat history**: your prompts and the AI's replies, exported as a doc or PDF.

Also keep in mind:

- Make a **separate commit for each task** (the bug fix, then each feature one by one).
- Push to your own account's repo. **Don't raise a PR** to the SETAPESU26 repo.
- Try to get each task done in 3-4 prompts, since that's part of the point of the lab.

Since the chat history is graded, it's worth doing the fix and features through prompts in one chat so the export shows a clean flow.
